Pathology Gross Specimen Evaluation Checklist

Note: Do not be a *Stepford Pathologist* and conform or restrict to this format. This is merely a checklist for evaluating a gross speciment received by a pahologist. One must choose to add, substract, or modify the entries as per his/her accumen and discretion

Checklist	Details
Specimen Identification	
Name, age, gender, date of birth, ID number, ward/OT no., file/MRD no, etc. (can be excluded in educational and research modules)	
Clinical summary	
Clinical history and examination findings	
Biochemistry, hematology, serology, and imaging studies	
Biopsy and frozen section	
Procedure Details	
Name of the procedure indicating the exact extent, side, site of tissue resected	
Indication of resection/biopsy	
Additional **surgery or procedure notes**	
Operation Theater to Laboratory Transport	
Was the specimen obtained directly from **surgery** or is described from **museum**	
If received from **surgery**, how was the specimen transferred (fresh/formalin-fixed)?	
If received from **surgery**, was a frozen section reported prior? If so mention in detail.	
If received from **surgery**, how many containers and/or specimen were received?	
Was the specimen received in a **condition** best suited for reporting, if no **explain** how it	
Confirm that all the pathological specimen from one patient are considered	
If **formalin-fixed/mounted**, identify the orientation or exposure (where possible)	
Identification of Structure(s) (on display)	
Name the anatomical structure mounted or selected for teaching module *precisely* along	
Type of structure (**solid or hollow**)	
Name and describe **adjoining and/or additional structures** (attached or unattached) present along with possible reason for resection	

Checklist	Details
How **certain** are you about the above identification based on gross observation alone?	
External Appearance of the Structure(s)	
Dimensions of the structure (lxbxw) (in cms)	
Weight of the structure (add weight of entire organ where possible)	
Color of the structure	
Texture of the structure	
Any other **conspicuous abnormality** (cyst, nodule(s), scar(s), depressions, elevations,	
Covering (if any) (e.g. serosa, capsule, fat, perforation, rupture, etc.)	
~~**Lymph nodes** (if provided) (with count (n), size of largest and smallest LNs, and~~	
Description of **additional structures** (where provided) (already listed above, just	
Internal Appearance of the Structure(s)	
Was a **section** required to visualize the organ internally	
What are the **structures visualized**	
In case of **solid** organ	
How was **inner surface** explored (explain the sections) (orientation and anatomical level,	
Comment on **internal anatomical structures** (vessels, ducts, bronchioles, etc.)	
Native anatomy (intact or *altered)*	
Location of lesion wrt organ surface or resection margins	
In case of **hollow** organ	
Bag like or **tubular**	
How was inner surface explored (explain the sections) (orientation and anatomical level,	
Native anatomy (intact or *altered)*	
Overview of Pathology	
Thickness of wall	
Extent of wall invasion (if applicable and visible) (Mention how section(s) were taken to identify invasion)	
Lumen (dialation, constriction, strictures, torsion, volvulus, intususseption)	
Location of lesion wrt organ surface or resection margins	
Lesion Description	
Number of lesions to be reported (describe each seaparately as relevant)	

Checklist	Details
Contour of lesion (growth, flat, ulcerative)	
Size (lxbxw) and **shape** (compare with size of organ or resected specimen)	
Location (report distances wrt organ boundaries, layer of origin and/or surgical resection	
Color/texture (use precise adjective where possible and applicable)	
Growth (characteristic adjective, margin, height, depth of penetration)	
Ulcerative (characteristic adjective for edge and margin, depth, floor, base, content)	
Consistency (homogenous or heterogenous along with appropriate adjective)	
Dimensions and/or invasion of wall of hollow organ, adjacent structures	
Polyp, diverticuli, growth (ennumerate, define size range, adhesions (if present))	
Presence of stones, parasites, secretions, foreign body in lumen (describe)	
Secretions/exudate	
Appendage/adhesions	
Staging (TNM) (for neoplasia, describe as much as possible, along with criteria used)	
Other Macroscopic Findings	
Provide an exhaustive account of features beyond the checklist	
Microimaging	
Histology sections suggested and/or opted (describe in detail) (Routine and/or special stains)	
Histopathology report	
Immunohistochemistry (if present)	
Genetic studies (if present)	
Clinical Correlation	

Checklist	Details
Clinical **corroboration**	
Further **recommendations**	
Additional **Notes**	
Disclaimer	# The specimen reported above was obtained from museum archives, hence this information is either speculatively drafted for de-identified teaching purposes and/or obtained from museum notes.
